

 **MouldEx**

CONCENTRATED Mould remover

How does HYDRO™ MouldEx work?

Contrary to the majority of products on the market it is not a harsh chemical that destroys everything in its path and leaves massive damage to the environment in order to get an instant visible result.

HYDRO™ MouldEx is a pH neutral and biodegradable specifically formulated to inhibit the growth of mould, lichen, moss, algae etc. Its formula allows for the usage on almost any surface and protects it. The penetrating action of HYDRO™ MouldEx will inhibit growth for a months to come.

HYDRO™ MouldEx is highly concentrated to allow a rapid action in speeding up the breakdown and when in bond with the substrate will inhibit any new growth.

The high UV and the rain will then destroy and wash the left-over growth away and speeding up the weathering action without damage to your surfaces, doing the work for you..

HYDRO™MouldEx can be used in three ways:

1. As sole action, by spraying the affected surface and then have Mother Nature do the work for you (takes time depending on condition; UV and sun)
2. As a final work after mechanical clean up (pressure wash, dry cleaner scrubbing etc.)
3. Preventive usage indoors for a 'normal' clean of the bathroom, showers, affected surfaces to prevent a reappearance of growth.

HYDRO™MouldEx Concentrate:

- 1L (it makes up to 11L of product) covers up to 100-110sq meters depending on surface and growth and UV/sun.
- Unlimited shelf life both in its concentrate and mixed, providing it is in a locked container and stored in a cool place.
- Inhibits the re-growth for years to come.
- Is an easy to apply.
- Does not need scrubbing or pressure washing (if time is not the issue).
- Bleach & alcohol free.
- Biodegradable.
- Same pH of 7-8 as H2O.
- Environmentally Friendly Process.

When to expect results from HYDRO™MouldEx when used as a spray-on only saturating the substrates.

- You see results within a few days.
- Algae disappears, Moss will turn brown/light within a few days and will decompose within a few weeks. In more sunny places the reaction is faster and stronger.
- Black mould will noticeably improve within several months, heavy black mould growth might take up to 12 months.
- Lichen requires two applications (wet on wet within 10-20 minutes) and will take up to one year to decompose.
- Some surfaces might show a different colour after application this shows that it is working and it will not be permanent but disappear.

When to expect results from HYDRO™MouldEx when used as protection after mechanical clean (dry clean, pressure clean)

- You see results within a few hours.
- Algae, Moss will not return and 'leftovers' will decompose within a few weeks.
- Cleaned Black mould will not come back.
- Cleaned off Lichen that have their roots still in the ground will take up to 12 months to decompose.
- Some surfaces might show a different colour after application this shows that it is working and it will not be permanent but disappear.

When to expect results from HYDRO™MouldEx when used for indoor Cleaning

HYDRO™MouldEx is also antibacterial sanitises and kills any mould and mildew as a matter of course when used in the bathroom or surfaces in your home. HYDRO™MouldEx will provide a super clean surface, free of bleach and alcohol. Just spray onto your surfaces and let dry the excess product can be wiped away with a cloth or sponge. For best results clean the infected surface first with mechanical way and with a cloth/sponge as you would when doing your normal clean, then spray HYDRO™MouldEx; have it work for you a few minutes before wiping the excess of.

*When cleaning your bathroom please do not use bleach since it will degrade the grout of your tiles over time and so increases the risk of water damage to the wall and giving the mould an even better hold.

When to expect results from HYDRO™MouldEx when used for Roof Cleaning

Roofing done properly: First clean/scrape/ brush every tile/part of the roof to remove the moss algae lichen etc.; Then treat the roof with a healthy dose of HYDRO™MouldEx, bringing the colour back into the tiles. The long-lasting HYDRO™MouldEx will give you years of clean roofs. After the roof has been sprayed, we leave the elements to do the work. For dirtier, stubborn roofs the full deep cleansing process can take up to 9 months, however, a big difference can be noted in the first few months. All you need to do is a little maintenance every now and then making sure any growth/leaves/sand etc. is regularly removed as you would.

When to expect results from HYDRO™MouldEx when used for Driveway Cleaning

The Process Start to Finish

1. **Weed Kill** - before work is carried out ensure all the weeds are killed or pulled.
2. **Dry clean** - brush all of the dead weeds and moss off the driveway using a mechanical means, (mechanical rotation brushes).
3. **Pressure Wash** - please make sure you use the right pressure for your substrate. If you have bricks or a spaced stone driveway a pressure wash can do more harm than good by removing the grout/fillings between the stones. It might damage the integrity of your driveway. Dry Clean will be better.
4. Often such damage is not immediately obvious, but water blasting can cause significant pitting to the surface. This will result in rainwater staying longer on the surface allowing the mould, lichen and algae to become established more quickly than before. Not so when you use HYDRO™MouldEx.
5. **Retreatment** - Return every 6-8 months as part a regular upkeep. Bricks or a spaced stone driveway might have to be cleaned more often since the gaps/fillings between the stones/bricks will establish grows much faster than the stones/bricks. We do not recommend a pressure wash on these substrates
6. **HYDRO™MouldEx** can be used on any outside surface, which makes it ideal for treating commercial buildings suffering from organic growth like mould, lichen and algae etc... The high concentration of HYDRO™MouldEx makes it the perfect solution for commercial cleaning. Pressure washing or steam cleaning buildings can take many man-hours and can cause serious and permanent damage. You can have HYDRO™MouldEx do it for you.

HYDRO™MouldEx concentrated formula will not damage your surfaces, which can happen when harsh chemical cleaners are used. The dilution can vary depending on the substrate and the amount of sunlight. A higher concentration will be needed in places where the sun and the UV have less impact. As a Cleaning Pro you will save considerable amounts of time and money, as **HYDRO™MouldEx** is very fast to apply. Your considerable reduction in labour costs will give you an advantage over other cleaning products on the market.

We can guarantee 2-5 years, depending on substrate. Can be supplied in 5+10+ 20 ltr
